

```
class MyServlet extends
HttpServlet {
    public void service(httpReq,
httpResp) {
    }
}
```

```
web.xml
<servlet>
    <servlet-name>myservlet</servlet-name>
    <servlet-class>MyServlet</servlet-class>
</servlet>
<servlet-mapping>
    <servlet-name>myservlet</servlet-name>
    <url-pattern>/myservlet</url-pattern>
</servlet-mapping>
```

Always a request will be resolved to an Servlet class based on url-pattern only

```
class MyController implements Controller {}

<bean id="myController" class="MyController"/>
```

```
SimpleUrlHandlerMapping
|-mappings
|-/mycontroller.htm=myController
```

```
class
DBUrlHandlerMapping
implements
HandlerMapping {
}
```

request mappings

path	controller
/mycontroller.htm	myController
