

#1. InternalResourceViewResolver

```
<bean class="InternalResourceViewResolver">
  <property name="prefix" value="/WEB-INF/jsp/" />
  <property name="suffix" value=".jsp" />
</bean>
```

note:

1. The logicalViewName must match with jsp pageName because of CoC
2. it must be configured as last ViewResolver in the chain of ViewResolvers

#2. BeanNameViewResolver

```
<bean class="BeanNameViewResolver"/>
#here for each logical viewname we should specify which View class
to be used for rendering view and configure it as bean definition
who id should match with logical view name

<bean id="our-mission"
class="org.springframework.web.servlet.view.JSTLView">
  <property name="url" value="/WEB-INF/jsp/our-mission.jsp"/>
</bean>

<bean id="contact-us"
class="org.springframework.web.servlet.view.JSTLView">
  <property name="url" value="/WEB-INF/jsp/contact-us.jsp"/>
</bean>
```

#3. XmlViewResolver

```
<bean class="XmlViewResolver">
  <property name="location" value="/WEB-INF/views-beans.xml"/>
</bean>
```

#here for each logical viewname we should specify which View class
to be used for rendering view and configure it as bean definition
who id should match with logical view name

```
<bean id="our-mission"
class="org.springframework.web.servlet.view.JSTLView">
  <property name="url" value="/WEB-INF/jsp/our-mission.jsp"/>
</bean>

<bean id="contact-us"
class="org.springframework.web.servlet.view.JSTLView">
  <property name="url" value="/WEB-INF/isp/contact-us.isp"/>
</bean>
```

/WEB-INF/
views-beans.xml

#4. ResourceBundleViewResolver

```
<bean class="ResourceBundleViewResolver">
  <property name="basename" value="views"/>
</bean>
```

views.properties

```
our-mission=org.springframework.web.servlet
.view.JSTLView
our-mission.(url)=/WEB-INF/jsp/our-mission.jsp

contact-us=org.springframework.web.servlet
.view.JSTLView
contact-us.(url)=/WEB-INF/jsp/contact-us.jsp
```

views_en_IN.properties

```
our-mission=org.springframework.web.servlet
.view.JSTLView
our-mission.(url)=/WEB-INF/jsp/our-mission-in.jsp

contact-us=org.springframework.web.servlet
.view.JSTLView
contact-us.(url)=/WEB-INF/jsp/contact-us-in.jsp
```

#5. UrlFileNameViewResolver

```
<bean class="UrlFileNameViewResolver">
  <property name="viewClass" value="org.springframework.web.servlet.view.JSTLView"/>
  <property name="prefix" value="/WEB-INF/jsp/" />
  <property name="suffix" value=".jsp" />
</bean>
```
