sourcecode
[project]

build tool

[war]

1. download server
2. install & configure
3. deploy

deploy on
the container infra

[server is declared as
library aspart of the
code]

sourcecode
[project]

build tool

The binary produced our of the build itself contains
server as a code, our code can kick-star the server in itself
without explicitly packaging and deploying the code on the
server.
